Learn more about The Helmet is critical if you're speeding around an open track, racing cars, and indulging in this exciting motorsport. Racing at high speeds is exhilarating, but it's also a bit dangerous. The helmet allows you to indulge in the sport you love while staying safe. And in the event of an accident, the helmet can really be a lifesaver. That's why it's so important to avoid an old helmet when you climb into your car and instead choose a helmet that is specially built to withstand the pitfalls that can come with racing. You need a helmet that takes racing as seriously as you do. While there are plenty of options, we've rounded up our picks with the best car racing helmets right here. They keep you safe, allowing you to still be comfortable and free on the track. Best Car Racing Helmet If there's a helmet that's safe, strong and reliable, it's the Conquer Snell Approved Open Face Racing Helmet. A great choice for any driver who prefers an open-faced helmet, this rugged and reliable racing helmet is a fantastic overall product. Made of lightweight fiberglass kes, it is comfortable to wear and prioritizes safety above all else. This Conquer racing helmet is a padded fireproof material that helps the pillow in your head. Removable cheek pads ensure that you can increase or decrease your comfort according to your personal preferences. Worried about getting warm? This helmet is an air flow ventilation that allows the air to flow freely. Kevlar's jaw strap will secure it all in place. One of the biggest - and most importantly - details of this Conquer open face racing helmet is that it's Snell approved. It is certified by Snell SA2015, which means it meets Snell's strict safety standards to ensure you wear one of the most protective headgear. That's why, no matter what level you compete or compete at, you know you're ready and protected. Drivers who want full coverage of their helmets love Conquer Carbon Fiber Full Face Auto Racing Helmet. This car racing helmet is lightweight, but it offers full coverage and full upholstery to ensure it fits comfortably. The helmet is made of carbon fiber composite, giving it a hard outer kes in a sleek style. Beneath it is a padded interior built from fire-resistant material to enhance safety. A series of airflow openings are also all over the helmet to ensure you stay cool and breathable when you race. Finally, a three-millimeter zero opponent, the flame-resistant shield is with a tear post. In addition to looking cool, this Conquer full-face car racing helmet is also very safe. It is Snell SA2015 certified and it contains HANS threaded inserts in the kest. Snell's safety standards are very so you can safely trust that this car racing helmet is properly adjusted to keep you safe through the track. The Conquer Open Face Rally Racing Helmet is more than just a safe car racing helmet. It also offers some rewards for drivers that will give you increased versatility and some unique benefits. Made of fiberglass with an outer shell, this helmet is lightweight and won't weigh you down. Inside, comfort is suitable for a padded interior made of fireproof material pillow for you. Removable cheek pads can be added or withdrawn depending on your preferences. And the entire helmet has Snell SA2015 approved, which means you can choose a car racing helmet that is made to meet Snell's tough safety standards for car racing. But where this helmet looks is its extra features. Removable cheek pads are not only for convenience – you can adjust them to install a wireless or wired communication system. To reduce noise and to be able to communicate clearly, there is a microphone protection. This is the perfect helmet for anyone who needs to have seamless communication when competing. And you don't have to sacrifice safety to get these extra features and benefits. For the pros of name and nature, Bell's K. 1 Pro Helmet is up and coming to the model watch out for the car market. This SA2015 approved helmet, available in various colors, including white, matte black, circuit red and circuit blue, is for all racers who want the best helmet to suit their racing needs. The good chin bar design is just one of many features that allow the K. 1 to stand out from the crowd. Optimal ventilation is good between the helmet and the large one: and Bell's helmet is undoubtedly one of the last through fitting bar openings, ten intake and extraction vents around the upper and lower chin. However, our personal favorite feature is a hollow synthetic rubber seal that stops all specs of dust and dirt passing through the helmet. All in all, this cool and comfortable helmet is at an unbeatable price. Do you tedle to acquire a helmet that has greatness equal to par for your racing abilities? RaceQuip's shiny white helmet is a envy of other riders practically drooling with envy. Not only does it look good, but it will help you get in perfect form thanks to the optimal head and neck support it offers. If you've had trouble in the past with helmet fittings, the RaceQuip website contains a comprehensive size chart so that you're not guessing - hence jeopardizing your safety on the track. In particular, we love how Decal's helmet face shield is removable, allowing the user to customize depends on personal preference. Join heaps of satisfied racers and choose RaceQuip - you won't regret it! HJC helmets AR10 III Auto Helmet is a great choice because it combines all the best features of top car racing helmets into a lightweight, easy to wear product. It's tough and strong, it's very safe and defensive, and it's convenient in all different settings. Made of rubber tone material and weighing just four pounds, this helmet is lightweight and comfortable. The outer shell is built into an advanced fiberglass composite knit using an advanced design that is just a car for racing. It has a polycarbonate anti-mist shield with tear poles and a pre-installed M6 terminal for head and neck security systems. Acc's advanced guidance ventilation system ensures full air flow from the rear, rinsing the heat and humidity to keep you cool. You can even customize this car racing helmet with optional shield for a range of colors. While the exterior of this car racing helmet is sleek, what is inside is also great. It is lined and padded with comfortable, fireproof and moisture-resistant carbon material. You don't fight discomfort as you race, whether you're facing high heat, dust, or something else. And most importantly, with Snell SA2015 approval, you know this helmet is safe and well. If Zampi's eight bright designs are not enough to attract you, the desirable features of your large OT helmet will have you typing your bank details at the speed of light. Whether you're interested in simple, minimal designs or likes to stand out from the crowd, you have a wide range on the scale of solid black graphic orange. In terms of ventilation, the way vents can be adjusted according to your personal preferences. Also, while protective foam upholstery can easily protect your head and neck when you run into difficulty, it's not too warm to cause you to swelter the track. Zampi helmet ensures quality at each level, meeting all Snell and DOT safety standards. Warning: This product does not contain glasses. Will we ever get enough of Conquer and their attention to detail? In short: we absolutely can't! Their Aerodynamic Auto Facing Helmet has five stars in every way. For starters, the stability it gives thanks to the chin bar makes you a better driver: when peace of mind knowing that you have secured head and neck protection is priceless. Being a Snell SA2015 certified design, Conquer turns a fireproof upholstery interior from SA claim into a significant feature. While several drivers may complain about the tight fit of this aerodynamic helmet, Conquer recognizes that the snugger fits, the less the neck strain the driver feels in the driver's seat. And countless other riders agree! Just like Conquer, RaceQuip equips drivers with the security they crave over and over again. Their second product today review, their Snell SA2015 shiny-white Open Face Helmet, allows drivers to feel the wind on their faces when racing: a sense of complete freedom. RaceQuip do the tote and instead focus on making your driver comfortable and secure. While some bemused customers talk about how the helmet is so big it makes them look like a Spaceball Trooper, one massive plus is that there is a lot of squirm room. Plus, RaceQuip pulls out all the stops to ensure their SFI-helmet is as durable as you can get thanks to the added storage bag and its fireproof design. Available small extra-large, it's a reliable helmet suitable for all racers. Our latest product to review today is one of our favorites. Conquer's Rally Racing Helmet is a racer who knows they have bee knees. Its fiberglass shell construction keeps the helmet light, reducing neck strain and overall fatigue while racing. Plus, as all rally racing helmets should be, this is Snell SA2015 Approved. Conquer understands that drivers do not want an intrusive sticker on their peripheral vision. Instead, the company ensures its brand sticker stays tight inside its helmet. One of our favorite features is a sweet optimal solar visor that can be removed if you want. The only problem you have with this helmet is to choose what shade to go for – Matte Black or Shiny White! Acceptable at all SSCA-sanctioned events, this helmet will take you on the road for days without any problems at half price. Picking up a new racing helmet isn't easy. You have to consider safety, but you also need to consider other details, such as your comfort and how well the helmet works when you drive. You also need to make sure that you are choosing a helmet that is designed for racing instead of other types of driving. If you're trying to sort out all the helmets out there, our buy guide will help you find the right racing helmet for your needs. The things to consider when buying a Car Racing Helmet buying a car racing helmet are not really something you decide to acquire: it is a necessary step you need to take to allow onto the race track. Therefore, if you are to get a helmet, it can also be one that draws your attention. Ask yourself these three relevant questions below before ordering the helmet right for you. Does my future helmet meet Snell SA15 ratings or exceeds them? Buying a Snell SA2015 certified helmet gives the rider the peace of mind that they are protected when wearing his Special Application helmet in competitive motorsport and racing. However, the Snell SA15 ratings - where the manufacturer must provide fire-resistant lining and head and neck restraints to protect the driver - mean that all helmets performed in this purchase guide are not suitable for motorcycle users because they are designed for smaller eye ports. Thus, these smaller eye ports may affect the visibility of the (moto)biker while driving and thus the overall safety of others. Is my helmet ventilated enough? Look for a helmet that contains vents so the driver can breathe easily. Otherwise, they run the risk of becoming exhausted before they leave the starting line. Models such as Conquer Snell's Aerodynamic Auto Facing Helmet includes ventilation for the front, rear and top to ensure that the user receives an optimal amount of air in circulation. What is the head and neck support system? Security systems are arguably the most important part of any helmet - without them, the head could go spinning when it comes to collision. While they are pretty expensive, a serious driver is buying snell SAH2015 rated helmet and not just his run-of-the-mill SA2015 to make sure they are fully protected. Full vs. Open Face Car Helmets All racers are either full faces of helmet people or open faces of people. If you're new to auto-racing, it's time to decide which category racer you get into! Statistically speaking, full face helmets are safer than open face helmets. However, if you unfortunately conflict with the stats - which confirm that full front helmets are statistically safe - and are involved in a collision, these helmets are much harder to remove when an accident happens. Nonetheless, we cannot blame the racer for choosing full-face construction when it pours in the rain and they are protected from the elements. No doubt: open face helmets look very damn cool. Plus, we're going to play lawyer and argue that the above stats may be wrong because the lack of blind spots accompanying neck movements makes these helmets safer in many respects. However, their open construction means that fierce winds and bad weather can distract the driver, causing more accidents that could have been prevented. In conclusion, both helmet designs have these remarkable rewards. It's now up to you to decide which style suits your personality and thirst for adventure! Types of car helmets Racing helmets: Competitive racing is an incredible sport; if all goes according to plan. However, even with only one small slip, you could be on the runway and on your way to the emergency room. Therefore, your racing helmet must comply with snell or FIA homologations for safety reasons. It is also recommended to buy a full-face helmet if your chosen ride is a single-digit or prototype car. Be careful out there! Rally helmets: Have you ever noticed as soon as you tell people that you're a rally driver, they pull all sorts of strange faces? This is true: rally drivers are basically adrenaline junkies who go through a controlled threat. Therefore, as with typical racing helmets, your helmet must be Snell or FIA-homologized and as durable as possible. You know the quality of the rally helmet when they have received an attached intercom, as communication is important for rally racing. Karting helmets: Karting may seem to onlookers like just a bit of fun. However, hitting the tire wall head-first can cause some pretty serious injury. Go for a lightweight model to reduce the neck strain – you can thank us later! Track Day Helmets: These helmets are days of cooling and training on the track. No, they don't have to be as tenacious as race helmets, but we still recommend investing heavily - especially still going up gears hit at high speeds. Fiberglass vs. Composite vs. Carbon Fiber Car Racing Helmets It's strong, inexpensive and ready to rush together. Fiberglass is one of the cheapest helmet materials on the market: buyers who are not willing to break into the bank can ensure fiberglass bargains steal. However, they are recommended for slower riders, who are often not in major collisions. This is due to fiberglass's fragility and tendency to consume the effects through crushing. So, while the helmet is against one crash, the other can fatally injure a high-intensity racer. An excellent blend of all the best features of a variety of materials, composite crash helmets are the focal point of fiberglass and carbon fiber helmets. If you want to safely aim in the middle of the road, we recommend choosing this fine material. If you don't like the helmet to weigh you down, carbon helmets are significantly lighter than glass helmets, thus reducing fatigue and thus rider overall safety behind the wheel. If you're willing to invest in safety and performance (which we believe everyone should!), carbon fiber helmets are the best to block. How to choose the right size If each helmet manufacturer got a dollar, how many times the buyer complained their helmet is too tight, they'd be retired already! The right size of the helmet, at first, should feel uncomfortably tight. In other words, it should feel too tight to the point that you can't wear it if the helmet was a little smaller. So if you feel the cheekbones and liners pushing your noggin against it, you have the right fit. If you still need a little reassurance that your helmet fits as well as a small glass of slippers installed by Cinderella, try to pull the helmet off. No easy movement is allowed! However, thanks to numerous installation charts companies now produce every helmet, you have little help to ensure your helmet provides surefire protection when you're on the race track. Our Top Pick Our top pick for the best racing helmet? This is the Conquer Snell-approved Open Face Racing Helmet. It's an all-around big helmet for both safety and comfort. It's lightweight thanks to the glass fiberglass shell, but it's also very durable. It protects you from the inside out, fireproof upholstery under the outer casing of the disk. HANS threaded inserts to provide another level of security while you are on the runway. You're worried it's going to get hot if you hurry up on the tracks? Ventilation throughout this car racing helmet will help keep your cool and increase air flow. And most critically, this Conquer open face helmet is Snell SA2015 certified. It is safe and can withstand Snell's strict safety standards so that you can trust its effectiveness firmly. Sources: Add rating
